

Linewize Monitor Cloud Scan module

Ensures images in your school's cloud are safe, legal and compliant.

About the **Cloud Scan module**

Linewize Monitor's Cloud Scan module is an AI detection tool that keeps a school's cloud storage free from harmful, illegal or non compliant imagery.

How it works

The Cloud Scan module scans the school's cloud storage every 24 hours, and makes any image considered to be a risk, immediately inaccessible.

Risk images are categorized and a designated school staff member is immediately alerted and given a choice of response options.

Designated staff can make informed decisions on what to do next, including quarantining, deleting or releasing the image for viewing.

Cloud Scan module features & benefits

✓ **Legal compliance:**

Ensures compliance with legal requirements in the Children's Internet Protection Act (CIPA), relating to access through computers to visual depictions that are obscene, child pornography, or harmful to minors, by immediately removing such images from access.

Aligns with school-specific acceptable use policies for cloud storage, preventing access to prohibited content and promoting responsible digital citizenship.

Detailed insights and contextual data supports investigations and due diligence in addressing potentially harmful imagery.

✓ **No IT burden:**

Designated staff receive full contextual data on suspected risk images, informing next-step decision making and eliminating reliance on IT.

✓ **Saves busy staff time:**

Full contextual data and image categorization allow designated staff to see, assess and act immediately. Images can be made safe within minutes, without much disruption to the working day.

Clear insights and data-driven support enables designated staff to make informed decisions without further investigation.

Get in touch
