

Linewize School Manager Content-aware Module - Image Blurring

Prevent students from viewing harmful or inappropriate images in real time
- on any website or search engine.

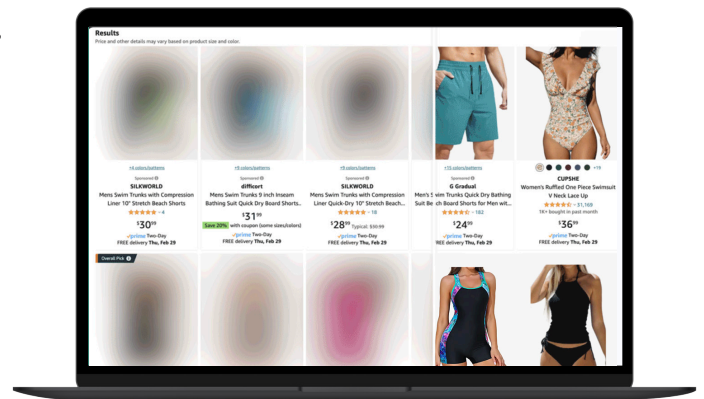

About the School Manager Content-aware Module

Reinforce your School Manager filter with real-time features to support a safer online browsing experience for all.

Linewize's School Manager filter now comes with an optional Content-aware Module.

The Content-aware Module provides an added level of granularity to support learning and keep students safer than ever before.

Image Blurring is the first release within the Content-aware Module, and focuses on imagery. Rather than filtering by URL, Image Blurring assesses the imagery on each individual page, allowing some pages through while blocking or imposing restrictions on others.

Risk assessing pages, not sites gives students access to a greater volume of safer content for a better learning experience.

What's more, the Content-aware Module works in real time, meaning there is no time lag between harmful content going live and our filter's ability to block it. Students are protected in real time, all the time.

Image Blurring features & benefits

- ✓ Blurs images across the most commonly searched categories, including pornography and intimate apparel, such as swimwear and underwear.
- ✓ Checks every image on new, uncategorized, or exchange proxy websites in real time, leaving no gaps in which children can be exposed.
- ✓ Allows access to school-approved exclusion lists to support curriculum needs and keep students on a healthy academic track.
- ✓ Provides customizable control of blur sensitivity levels to prevent over-blurring and ensure a safe, balanced learning environment.
- ✓ Meets CIPA requirements for preventing access to obscene visual depictions.
